

Car –WashTecno is a product line dedicated to car-wash systems. The two gearbox ranges that make up this line are the wormgearbox CWT050/CWTS050 and the small helical gearbox CMG002. Both gearbox ranges are ideal for use in car wash equipment. The CWT050/ CWTS050 have been designed and produced to move the brushes (horizontally and vertically) in the car wash and the helical gearbox is used to move the brushes that clean the vehicles wheels.
