TRANSTECNO®
THE MODULAR GEARMOTOR

Iron AC Iron

The IRON range consists of the helical ITH, bevel helical ITB and the parallel shaft -mounted ITS gearboxes. This range is made of very strong cast iron and covers torques up to 3500 Nm. IRON gearboxes are ideal for application contexts that require top performance, whereby it is necessary to ensure smooth operation under any condition.

## Helical in-line gearmotors ITH

The ITH gearmotors are for industrial applications with particularly heavy loads. Their robust cast iron housings and highly modular different input and output kits mean they are suited to all types of application.

The ITH helical gearbox series consists of 4 sizes: ITH 112/3 – ITH 122/3 – ITH 132/3 – ITH 142/3. Transmittable torques are: 700 Nm, 1000 Nm, 1800 Nm

## Helical bevel gearmotors ITB

The ITB gearmotors are for industrial applications with particularly heavy loads. Their robust cast iron housings and highly modular different input and output kits mean they are suited to all types of application. The ITB bevel helical gearbox series consists of 3 sizes: ITB 423 – ITB 433 – ITB 443. Transmittable

## Helical parallel gearmotors ITS

The ITS gearmotors are for industrial applications with particularly heavy loads. Their robust cast iron housings and highly modular different input and output kits mean they are suited to all types of application.
The ITS shaft-mounted gearbox series is made with two types of frame.
They are universal, with foot and side flat gasket ring on one side only, or pendant, without feet and with side flat gasket ring on one side only.
3 sizes: ITS 922/3 – ITS 932/3 – ITS 942/3. Transmittable torques are: 1100 Nm,
